

HARDWOOD FLOORING

NATURE OF WOOD

- Seasonal variation in the climate will cause wood to naturally expand and contract.
- Wood must not be exposed to excessive moisture or dryness. Maintain humidity levels in your home as consistently as possible between 35%-45%.
- Natural sunlight may cause discoloration of wood and may cause wood to dry excessively.
- The surface of a hardwood floor can be dented and scratched during normal usage, to minimize, be careful when moving furniture and appliances. Dropping heavy items can cause dents and pet's nails can scratch the surface of your wood flooring.

LOVE YOUR NEW HARDWOOD FLOOR!

Natural wood flooring is a product of nature. Each species of wood has unique characteristics of grain and color, which are integral components of its beauty. Due to the nature of wood, there are preventive measures that need to be taken to maintain the life and beauty of your wood floor.

Your friends at,
FLOOR360

PREVENTATIVE MEASURES

- Avoid exposing wood floors to direct sunlight or bright lights. Shut shades on occasion to protect your floors.
- Protect flooring by installing felt runners under furniture or chair legs to avoid scratches when they are moved.
- Wipe up spills immediately! Place rugs in areas where liquids may spill or accumulate and cause damage.
- When moving furniture, lift to avoid scratching the floor.
- Don't oversaturate when cleaning.

MAINTENANCE & CARE

- Sweep or vacuum regularly. A vacuum with a hardwood floor attachment or one in which the beater bar can be turned off should be used to avoid scratching the floor.
- Do not use wax or oil-based soap or other household cleaners to clean wood flooring.
- Use the proper wood floor cleaner, spray lightly on a dust mop and mop back and forth lengthwise along floorboards. We recommend Bona Hardwood Floor Cleaner, available at FLOOR360.

*If your hardwood has an oil finish, other care and cleaning instructions will apply. Please see your manufacturer's care and maintenance form for recommendations.

DID YOU KNOW?

Humidity levels in the home should be maintained as consistently as possible (between 35% and 45%) by using a humidifier or dehumidifier as needed.
